-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 22, 23 and 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Maguire et al. (US 6652515) in view of Stern et al. (US 5741248).

Maguire et al. (US 6652515) discloses a method of reducing atrial fibrillation comprising inserting a catheter at least partially into the heart, the catheter having a balloon, a portion of the balloon located in the left atrium (figures 8a-f) and a pulmonary vein; inflating the balloon with a fluid (col. 18 lines 1-7) such that the exterior surface of the balloon is in contact with at least a partial circumference of the portion of the pulmonary. **Regarding claim 23** see col. 50 lines 61-63. **Regarding claim 24** see col. 19 line 60 – col. 20 line 32. Maguire is silent to the type of fluid used in the cryo ablation therapy disclosed.

Stern et al. teaches that it is old and well known in the art to use perfluorocarbon as a cryogenic fluid. Stern et al. also disclose that perfluorocarbon is a relatively inert, non-toxic, chemically and thermally stable. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide perfluorocarbon as the cryo fluid of Maguire et al. because of its inert and non-toxic properties.
